SURFACE SOLUTIONS

DECONTAMINATION SOLUTIONS

# D-TAM SKIN CLEANSERS

- No water, lanolin, aloe vera, alcohol, pumice, or harsh surfactants
- Do not enhance penetration of contaminants into skin
- Non-abrasive and skin-friendly, even with frequent use
- Remove aromatic amines (MDA, TDA, MOCA, aniline, o-toluidine, and more), isocyanates and urethanes, pesticides, phenols, epoxy resins, paints, and sealants

CLI by SKC D-TAM Skin Cleansers play an integral role in safety and health programs. Specially formulated with high molecular weight ingredients, patented\* D-TAM Skin Cleansers safely and effectively remove slightly water soluble chemicals and lipophilic (water insoluble) chemicals used with solvents. Unlike other cleansers, D-TAM will not penetrate or degrade the skin's natural lipid barrier or cause dryness and irritation – things that make skin more susceptible to chemical contamination. SKC offers D-TAM Skin Cleansers for both semipolar and very nonpolar contaminant chemicals:

**D-TAM:** Removes many intermediate polarity chemicals such as phenol, dinitrotoluene, benzene, malathion, nitroaniline, toluene, captan, MDA, and more

**D-TAM Gold:** Removes many very nonpolar compounds such as aldrin, pentachlorophenol, MDI, DDT, PCBs, and more

\*U.S. Patent Nos. 7,172,995 and 6,670,313

# DECONtamination SURFACE SOLUTIONS

- Safely clean aromatic amines and aromatic isocyanates from most surfaces
- Ideal for use after detection with Surface SWYPE indicators

CLI by SKC DECONtamination Solutions are an important follow-up element in housekeeping and dermal exposure reduction programs. Use CLI by SKC Surface SWYPE Indicators (see details at [www.skcinc.com](http://www.skcinc.com)) to detect chemical contamination on surfaces that can be contacted by workers or are outside of regulated areas. Follow up with DECONtamination Solutions to remove contamination and ensure minimal dermal exposures.
